Stem cell treatments for oropharyngeal dysphagia: Rationale, benefits, and challenges

Eric K Tran, Kevin O Juarez, Jennifer L Long

Abstract

Dysphagia, defined as difficulty swallowing, is a common symptom negatively impacting millions of adults annually. Estimated prevalence ranges from 14 to 33 percent in those over age 65 to over 70 percent in a nursing home setting. The elderly, those with neurodegenerative diseases, head and neck cancer patients, and those with
