It should be started by a good introduction, followed by describing NF-κB pathways and their role in inflammation and cancer from the mechanistic point of view. Finally, regional specific role of NF-κB in cancer/inflammation (e.g. NF-κB in esophageal, stomach, colon cancer, etc.) should be discussed. Thank you for a very useful suggestion and we have incorporated the suggestions. The article should be closed by a conclusion and future direction.

We have included the 1above suggestion. Once again your advice was very helpful in making the article useful.
