HER2 inhibition in gastro-oesophageal cancer: A review drawing on lessons learned from breast cancer

Hazel Lote, Nicola Valeri, Ian Chau

Abstract

Human epidermal growth factor receptor 2 (HER2)-inhibition is an important therapeutic strategy in HER2-amplified gastro-oesophageal cancer (GOC). A significant proportion of GOC patients display HER2 amplification, yet HER2 inhibition in these patients has not displayed the success seen in HER2 amplified breast cancer. Much of the current evidence surrounding HER2 has
