Endoscopic ultrasound guided drainage of pancreatic fluid collections

Andreas S Vilmann, John Menachery, Shou-Jiang Tang, Indu Srinivasan, Peter Vilmann

Abstract

The revised Atlanta classification of acute pancreatitis was induced by international consensus and is based on the actual local and systemic determinants of severity. The local determinant includes pancreatic necrosis (sterile or infected) and the systemic determinant involves organ failure. Local complications of pancreatitis include acute peri-pancreatic fluid collection, acute necrotic collection, pseudocyst, and walled-off necrosis. Increasingly, interventional endoscopic ultrasound (EUS) is utilized in the management of these local complications. The authors performed PubMed search and a pre-defined inclusion criteria or filter was then manually applied. The authors reviewed the utility, efficacy and risks of therapeutic EUS and involved EUS devices among these settings, which we grouped as pancreatic fluid collections (PFC). The authors predict a continuing evolution in the management of these PFCs with improved and

[HTML] **Endoscopic ultrasound-guided drainage of pancreatic fluid collections**

[HTML] from nih.gov

C Fabbri, C Luigiano, A Maimone... - ... **endoscopy**, 2012 - ncbi.nlm.nih.gov

Abstract Pancreatic fluid collections (PFCs) develop secondary to either fluid leakage or liquefaction of pancreatic necrosis following acute pancreatitis, chronic pancreatitis, surgery or abdominal trauma. Pancreatic fluid collections include acute fluid collections, acute and ...

Endoscopic Ultrasound-Guided Drainage of Pancreatic Fluid Collections

JP Talreja, M Kahaleh - **Endoscopic Ultrasound**, 2010 - Springer

Abstract Conventional transmural drainage of pancreatic fluid collections (PFCs) has been increasingly performed in tertiary care centers. The development of endoscopic ultrasonography (EUS) has expanded the safety and efficacy of endoscopic drainage of ...
