COMMENTS TO AUTHORS

This is a complete and rigourously analyzed review on the potentially clinical use of faecal transplantation in potentially severe acute colitis like CDI , chronic IBD and functional disorder . One is related to the MS which may interfere with NAFLD severity. There are several grammatical and syntax and I provid hereby a version including some corrections . English should be revised by the Editoroal Board in order to have a more pleasant reading of the manuscript

COMMENTS TO AUTHORS

This paper reviewed the clinical efficacy and safety of faecal microbiota transplantation (FMT) on C. difficile-infection(CDI), inflammatory bowel disease (IBD), metabolic syndrome, constipation, pouchitis and irritable bowel syndrome (IBS). Promising results were obtained and further studies are needed to elucidate the mechanisms of FMT and to guard the adverse effects in large population of the patients.
