COMMENTS TO AUTHORS

Dear authors, This is overall well written review article about imaging diagnosis of liver cirrhosis. However, there are some minor corrections needed in your paper. 1. Abstract, line 2 "However, its invasiveness and sample bias" --> sampling bias 2. Introduction, 1st para "Therefore, early diagnosis of liver cirrhosis and quantification of the proportion of fibrosis in the liver are very important to management" --> very important in the management 3. Introduction, 6th para "In clinical practice, hepatic fibrosis..." --> this sentence needs to be corrected. 4. Imaging modalities, 1st para "gastrointestinal tracts due to venous congestion, and intrahepatic..." --> is it arterial-portal, arterial-venous shunt or arterioportal, arteriovenous shunt? In the Ultrasonography section, you mentioned it as arterioportal, arteriovenous shunt. 5. Ultrasonography, 3rd para "Texture analysis can improve diagnosis accuracy" --> diagnostic accuracy 6. Ultrasonography, 5th para --> more description about US contrast agent is needed, such as its usefulness, advantages and/or disadvantages, and limitations. 7. Magnetic resonance imaging, 3rd para "One study showed that MRE and SWE results" --> what does SWE stand for? It has not been used in the previous sections. 8. Magnetic resonance imaging, 4th para "(iii) and the results reflect hepatic steatosis, obesity, and

ascites" --> clarification of this sentence is needed. 9. Conclusion section needs overall language corrections. 10. Figure 4 --> ROI measurement should be shown in the corresponding images 11. Figure 6 --> there is no arrow on the image. Also, "The images shows decreased diameter of portal vein" should be corrected to "The image shows decreased.." 12. Figure 8 --> "B. The image of patient with liver cirrhosis shows heterogeneity of hepatic parenchyma enhancement with hypointense reticulations represents.." --> "representing"
