

Supplementary Figure 1 The expression of MRPL35 in gastric carcinoma cells. Quantitative reverse transcription-polymerase chain reaction (qRT-PCR) detection of MRPL35 in gastric carcinoma cell lines (AGS, SGC-7901, MGC80-3 and BGC-823).

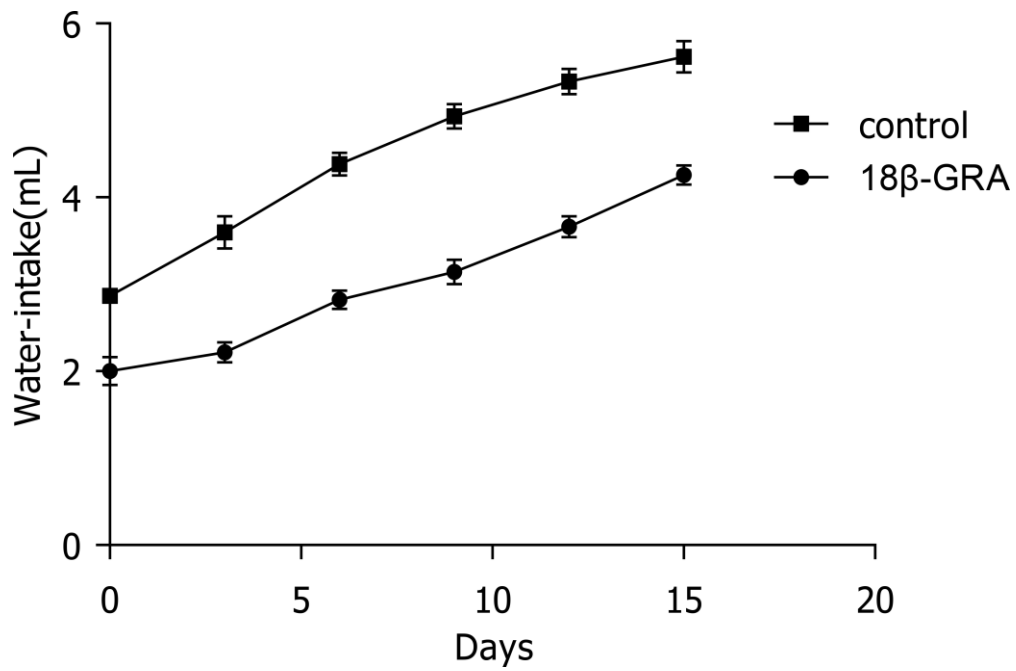

Supplementary Figure 2 Body weight monitoring data of **BABL/C nude mice**. After starting intragastric administration, the mice were weighed and recorded every other day, and the body weight curve of mice was obtained.

Supplementary Figure 3 Food-intake monitoring data of mice.

After intragastric administration, the food-intake of mice was measured and recorded every other day to obtain the curve of change in food-intake of mice.

Supplementary Figure 4 Monitoring data of water-intake of mice. After the beginning of intragastric administration, the water-intake of mice was measured and recorded every other day to obtain the curve of water- intake of mice.
