SPECIFIC COMMENTS TO AUTHORS

The authors have presented an interesting case of rhabdomyosarcoma of the left temporal muscle. I have following comments regarding the manuscript. 1. What was the preoperative diagnosis or differential diagnosis? 2. Is preoperative FNAC or biopsy advisable in such cases? 3. Is there any role of neoadjuvant therapy in such cases to allow preservation of underlying structures and reduce low recurrence? 4. Please provide the details about the chemotherapy and radiotherapy given to the index case. 5. Please complete the figure legend 4. 6. Please provide immunohistochemistry images if available.
