COMMENTS TO AUTHORS

Interesting and well written paper describing the role of HSP110 in gastric cancer with peritoneal metastasis.

COMMENTS TO AUTHORS

The study is the continuation of a previous one published in 2016. This time the HSP110 is analyzed in patients with gastric cancer and peritoneal metastases treated by HIPEC. The study both in vivo and in vitro is well managed and described. The results are not news considering the previous study (excluding the correlation between HSP110 expression and venous invasion), and in vivo there isn't statistical significance in the prognosis. The study shows some limits and at present its unique clinical employment can be as prognostic biomarker.

COMMENTS TO AUTHORS

1) The author did the study with 14 gastric cancer patients with specific treatment and experimented on one specific type heat shock protein expression as a prognostic biomarker. 2) For the result in table 1, the author should not use word 'relationship' on the heading of table. This table only showed characteristic of 2 group- populations and the similarity. 3) The author showed risk analysis table 2 that showed remarkable progress free survival rate relative to all risk factors. The result should be more explained in text. 4) For conclusion and discussion, the drug resistance of cisplatin is showed but not for TS-one. Some confounding factors should effect the progress free survival, not only heat shock protein expression. The author should put additional comment 5) I agree with conclusion that the author may test on more drugs those use in clinical practice or compare between drugs.

COMMENTS TO AUTHORS

Despite the quality of the work in our opinion all nuclear protein components require opsonization by complement before phagocytosis . Without the simultaneous measurement of the complement, the reader has difficulty in knowing if the effect was of the protein P110 or the complement. It may be necessary to emphasize that the dosage of the complement has not been performed. Congratulations for the quality of your work.I regretted the lack of complement comments.
