Prognosis of Intensive Care Unit Patients with Colorectal Cancer

This letter provides commentary on the manuscript "Intensive care unit outcomes and prognostic factors of colorectal cancer" (Manuscript No. 108539). The study is the first to present multicenter data on the 90-day mortality of patients with colorectal cancer (CRC) admitted to the intensive care unit (ICU), and identifies chemotherapy history, elective surgery, and conventional oxygen therapy as independent prognostic factors. We propose three refinements to enhance the study's clinical utility: 1) clarify chemotherapy details, including regimen and treatment phase, along with the surgical approach (curative vs. palliative) and how preoperative tumor staging influences prognosis; 2) elucidate the relationship between ICU admission etiologies and prognosis; and 3) incorporate CRC-specific biomarkers to optimize prognostic scoring systems. The study's core contribution is substantial, and ...
