Periodontally Accelerated Osteogenic Orthodontics with Platelet-rich Fibrin in an Adult Patient with Periodontal Disease: An Interdisciplinary Case Report

PAOO with PRF used for OTM

Abstract

BACKGROUND

In the clinical scenario, adult patients with periodontal diseases and dental malformation, characterized by dental crowding in lower anterior teeth with the thin biotype, often require orthodontic treatment. This case report aimed to evaluate the clinical and radiographic outcomes of periodontally accelerated osteogenic orthodontics (PAOO) combined with autologous platelet-rich fibrin (PRF) in an adult patient with
