**Psoriasis treatment: Unconventional and non-standard modalities in the era of biologics**

**Vikram K Mahajan**

### Abstract

Psoriasis is a potentially debilitating inflammatory dermatosis affecting 0.2-4.8% of the population worldwide causing a significant occupational, personal or psychosocial morbidity to these patients for life. The basic aim of psoriasis therapy is to control the disease to maximum possible extent and improve the patient's quality of life. Management of triggers for flare-ups, lifestyle modifications, and dietary supplements are often recommended. Intermittent or rotational therapy with frequent alterations in treatment options is usually needed to reduce toxicity of anti-
