Endoscopic full thickness resection for gastric tumors originating from muscularis propria

Deepanshu Jain, Ejaz Mahmood, Aakash Desai, Shashideep Singhal

### Abstract

Minimally invasive resection of local gastric lesions has remained a challenge for endoscopists. Over the last decade, newer techniques like endoscopic mucosal resection (EMR), piecemeal EMR (EPMR), endoscopic submucosal dissection (ESD) have come up. For subset of gastric tumors originating from muscularis propria, the success of ESD remains limited due to deeper location resulting in incomplete resection and increased incidence of perforation. Endoscopic full thickness resection (EFTR) seems to have overcome these pitfalls. EFTR has been successful in achieving complete resection of
