Non-alcoholic fatty liver disease: The diagnosis and management

Shehab M Abd El- Kader, Eman M Salah El-Den Ashmawy

2 Abstract

Non-alcoholic fatty liver disease (NAFLD) is now the most frequent chronic liver disease occurs across all age groups and is recognized to occur in 14%-30% of the general population, so NAFLD is a serious and growing clinical problem due to the growing prevalence of obesity and overweight. Histologically, it resembles alcoholic liver injury but occurs in patients who deny significant alcohol consumption. NAFLD encompasses a spectrum of
