SPECIFIC COMMENTS TO AUTHORS
1. What about the baseline bloods?
2. To clarify the BP (noted as 190/100 mmHg, 130/75 mm Hg). Was the BP controlled / what antihypertensive was used?
3. Was Endoscopy done before CT?
4. Dimensions of the lesion on sonography not mentioned
5. Was FNAC done in the repeat / II sitting of Endoscopic US? What is the extent of involvement (layers involved) on Endoscopic US?
6. After a final diagnosis of Schwannoma, why was proximal subtotal gastrectomy + radical abdominal lymph node dissection + esophagogastric end-to-end anastomosis undertaken?
7. What about the surgical details (open / minimal access / ports / incision)?
8. In retrospect, would a frozen section have helped / made a change in the management?
9. What about staging of the tumor?
10. Relevant CT image can be also included
11. The surgical planning recommendation for a gastric schwannoma to be indicated in the conclusion.

SPECIFIC COMMENTS TO AUTHORS
I have read this review article focus on Gastric schwannoma misdiagnosed as gastrointestinal stromal tumor by ultrasonography before surgery: A case report and literature reviewsent to be publish in on World Journal of Clinical Cases. As endoscopist no new data has been provided or no algorithm/table ilustrases the manuscript. A table/figure summarizing the article would be good
