Case Control Study

Single Access Laparoscopic total colectomy for Severe Refractory Ulcerative Colitis

John Burke, Des Toomey, Frank Reilly, Ronan Cahill

80,700 Results Any time ▾

In our experience, a **single-incision** laparoscopic approach to total **abdominal** colectomy for refractory ulcerative colitis has been shown to be **safe and feasible**. Initial results suggest that this technique can lead to improvements in short-term outcomes in selected patients.

What to expect before procedure

- The preoperative evaluation includes tests such as lab tests, chest X-ray, and electrocardiogram.
- Provide a list of all current medications at least two weeks before surgery. The doctor might ask to discontinue some medicines.
- Avoid solid foods the day before surgery.
- Laxatives or enema may be needed to clear the bowels before surgery.
