CAR T Cells: Engineering Immune Cells to Treat Cancer...
https://www.cancer.gov/about-cancer/treatment/research/carl-cells

July 22, 2019 - T cell immunotherapy is a new option for some patients with common lymphomas. In 2017, two CAR T-cell therapies were approved by the Food and Drug Administration (FDA), one for the treatment of children with acute lymphoblastic leukemia (ALL) and the other for adults with advanced lymphomas.

Jan 09, 2019 - GINTUIT® is a new option for gum reconstruction treatment. In fact, it is the sister product of Apligraf for wound healing. Technology platform of GINTUIT® is similar to Apligraf and both products are obtained through an identical process on circumcision scar skin that undergoes an enzyme digestion process [44].

Empty nose syndrome pathogenesis and cell-based biotechnology products as a new option for treatment

Condoleo L et al. Empty nose syndrome

Irina M Condoleo, Olga S Goloub, Roman Senik, Taisa Kusnik, Igor Zlenicki, Alena Zlenicka

Abstract

Empty nose syndrome (ENS) is a rare complication that develops after partial or

Parenteral nutrition (PN) provides lifesaving nutritional support in situations where caloric supply via the enteral route cannot cover the necessary needs of the organism. However, it does have serious adverse effects, including parenteral nutrition-associated liver disease (PNALD). The development of liver injury associated with PN is multifactorial, including non-specific intestine ...

Carcinoid Syndrome, Symptoms, Diagnosis, Treatment
https://cricinetics.com/carcinoid-syndrome-symptoms-diagnosis-treatment
Flushing. This is the clinical hallmark of carcinoid syndrome and occurs in 85% of NETs patients who experience symptoms of carcinoid syndrome. Flushing is a sudden, intense reddening of the skin with a warming and/or burning sensation of the face, head, and upper chest. These episodes occur spontaneously and can last anywhere from 30 seconds ...
