Hepatitis B **virus infection** leads to **multisystem manifestations** owing to involvement of kidney, skin, vasculature, haematopoietic and nervous system. The hepatitis B infection can cause neuropathy either to **vasculitis associated** with polyarteritis nodosa or immune-mediated neural damage. In this submission, we **report** a young woman, who presented with **mononeuritis multiplex ...**

Abstract. Mononeuritis multiplex is known to occur in many illnesses including certain types of systemic vasculitis. Anti-neutrophil cytoplasmic autoantibody (ANCA) has been described in association with Wegener's granulomatosis, polyarteritis nodosa, pauci-immune necrotizing crescentic glomerulonephritis, and so-called ANCA-associated vasculitis.

Abstract

BACKGROUND

Vasculitis, a systemic disorder with inflammation of blood vessel walls, can develop broad spectrum of signs and symptoms according to involvement of various organs, and therefore, early diagnosis of vasculitis is challenging. We herein describe a patient who developed a special case of systemic vasculitis with mononeuropathy multiplex, rectal perforation and antiphospholipid syndrome (APS) presented with pulmonary
