**SPECIFIC COMMENTS TO AUTHORS**

This manuscript retrospectively analyzed the clinical data of 439 high-risk pregnant women who received prenatal examination and delivered in the Shanghai Sixth People's Hospital affiliated to Shanghai Jiao Tong University School of Medicine from April 2022 to December 2022, and finally concluded that the Internet + continuous midwifery service model is of great significance in improving and promoting the maternal and child health of high-risk pregnant women by promoting innovation through integration. The manuscript is well designed and written. The legends and tables are detailed. The Abstract gives a good overview about the topic. The results were well discussed. However, before publication, the following issues need to be noted: 1. The content of the article is to compare the traditional midwifery service model with the Internet + continuous midwifery service model, so the reviewer suggests adding "Midwife" and "Traditional midwifery service mode" in the keywords; 2. Whether it is more appropriate to update "mother" to "parturients" in the section of Delivery stage and Postpartum stage; 3. In the view of the reviewers, "excessive amniotic fluid" is a common pregnancy complication, not a pregnancy outcome. Please confirm if "hydramnios" is required from...
the adverse birth outcomes? 4. In addition, in the part of Adverse Delivery Outcomes, not only "neonatal weight" but also "fetal weight abnormality" are included, is it repeated? 4. For “adverse birth outcome”, it is suggested adding a table to present the proportion of adverse birth outcome.

SPECIFIC COMMENTS TO AUTHORS

Dear Sir, I read the manuscript entitled "Effect of Internet + continuous midwifery service model on psychological mood and pregnancy outcomes for women with high-risk pregnancies" with great interest. Authors analyzed the effect of a midwife-led Internet + continuous midwifery service model on the psychological mood and pregnancy outcomes of women with HRP. They found that combination of Internet- and midwife-led continuous midwifery services can effectively expand the use of high-quality nursing service resources, realize the integrated management of women with HRP before and after delivery, and support special groups of women with HRP. The article is excellent, and I really thank the authors for their suggestions. I have no further comments.
