

Supplementary Table 1 Prespecified eligibility criteria

Participants	Interventions	Comparison	Outcomes	Study types
age >18years, spontaneous intracerebral hemorrhage	Intervention Laboratory indicating high NLR	group: value indicating NLR	Control laboratory normal Secondary Perihematomal edema growth. Only studies using one or more of these outcomes	Primary Hematoma Secondary outcomes: expansion. outcome: Randomized trial, observational cohort study

NLR: Neutrophil-to-lymphocyte ratio.

Supplementary Table 2 Newcastle Ottawa Scale for hematoma expansion

Ref.	Selection			Comparability		Outcome			Follow up	Follow up	Overall quality
	Representative cohort	Control selection	Ascertainment of exposure	Outcome at start of study	Control for intracranial hemorrhage	Control systemic factors	Outcome assessment	Follow length
