Acute-on-chronic liver failure: Pathogenesis, prognostic factors and management

Sara Blasco-Algora, José Masegosa Ataz, Sonia Alonso López, María Luisa Gutiérrez García, Conrado M Fernández-Rodríguez

Abstract

Acute-on-Chronic Liver Failure (ACLF) is increasingly recognized as a complex syndrome that is reversible in many cases. It is characterized by an acute deterioration of liver function in the background of a pre-existing chronic liver disease (CLD) often associated with a high short-term mortality rate. Organ Failure (OF) is always associated, and plays a key role in determining the course, and the outcome of the disease. The definition of ACLF remains controversial due to its
