PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases
Manuscript NO: 69801
Title: Huge gastric plexiform fibromyxoma presenting as pyemia by rupture of tumor: A case report
Provenance and peer review: Unsolicited manuscript; Externally peer reviewed
Peer-review model: Single blind
Reviewer’s code: 00070191
Position: Editorial Board
Academic degree: MD
Professional title: Professor
Reviewer’s Country/Territory: Turkey
Author’s Country/Territory: China
Manuscript submission date: 2021-08-09
Reviewer chosen by: AI Technique
Reviewer accepted review: 2021-08-10 10:26
Reviewer performed review: 2021-08-11 14:39
Review time: 1 Day and 4 Hours

SPECIFIC COMMENTS TO AUTHORS
In this case report, a case of PF of the stomach that manifests with rupture combined with pyremia is presented with a literature review. Basically, it is a well-written manuscript of a very rare tumor that should be considered in the differential diagnosis. Following revisions are suggested: 1. I would like to know which one of the authors performed pathological evaluation that is still the only option for correct diagnosis? This should be indicated in the author's contribution section. 2. Figure 4 should be revised because low-power microscopic figures are not enough to provide information about the histopathological findings of the lesion. Figures with higher magnification are recommended.
