COMMENTS TO AUTHORS

The paper entitled "Neuroimaging studies of cognitive remediation in schizophrenia: A systematic and critical review" is a generally well-written, comprehensive qualitative description of relevant studies with a plausible summary (incl. a nice illustration). Main concerns: 1. According to the descriptive nature the paper is not always easy to read (a bit tedious); perhaps, some more tightening up and streamlining could take place in a revision. 2. As reviews and meta-analyses already exist on this topic (cited: Wei et al. 2016; Ramsay & MacDonald 2015; not cited: Kurtz 2012 Expert Rev Neurother.), the additional insight seems to be limited. Perhaps, the authors could explain in some detail the insights and clinical implications making their paper special or unique. 3. minor comment: Result - Second period..., 2nd paragraph: "several posterior..." should be changed (subsequent, later, other, or cancel) - uncommon and misleading in the context of brain imaging studies... Thank you again, best regards.
