Updates in vaccination: Recommendations for adult inflammatory bowel disease patients

Khadija Chaudrey, Michelle Salvaggio, Aftab Ahmed, Sultan Mahmood, Tauseef Ali

Abstract

Treatment regimens for inflammatory bowel disease (IBD) incorporate the use of a variety of immunosuppressive agents that increase the risk of infections. Prevention of many of these infections can be achieved by the timely and judicious use of vaccinations. IBD patients tend to be under immunized. Some of the contributing factors are lack of awareness regarding the significance of vaccinating IBD patients, misperception about safety of vaccinations in immunocompromised patients,
