Endoscopic retrograde pancreatography: when should we do it?

Abstract

11

Endoscopic retrograde pancreatography (ERCP) is an accurate imaging modality in the diagnosis of pancreatobiliary diseases. However, its use has been substantially reduced due to the invasiveness of procedure, the risk of complications and the widespread availability of non-invasive cross-section imaging techniques (computed tomography, magnetic resonance imaging, and endoscopic ultrasound). Since the introduction of endoscopic sphincterotomy, ERCP has transformed from diagnostic method to an almost exclusively
