SPECIFIC COMMENTS TO AUTHORS

This manuscript reviewed the role of fecal calprotectin in pediatric gastrointestinal diseases. The author has provided an extensive discussion on several aspects, such as calprotectin in systemic diseases and gastrointestinal disorders, and some pediatric gastrointestinal disorders. This is an interesting review, and the authors distilled the key points and pros and cons. However, I still have several questions and suggestions listed below. Please make an answer or revision. 1. Fecal calprotectin levels may change in different gastrointestinal diseases. The author should provide a table describing the changes in expression levels of fecal calprotectin in different diseases, populations, publication time, and cited literature. 2. For the description of calprotectin, it is recommended to use images for a more vivid and readable presentation. 3. There is a large amount of stacked literature in some parts of this review, and it is recommended to be more concise. 4. Calprotectin is expressed differently in different diseases, but is it involved in the occurrence and development of certain gastrointestinal diseases? The author should discuss it. 5. The author should also discuss the reasons for the inconsistent expression of calprotectin in different diseases. According to the above, I
suggest the authors should answer the questions and make a revision.
