Name of journal: World Journal of Hepatology

Manuscript NO: 73092

Title: Polymorphism AGT2 (rs4762) is involved in the development of dermatologic events: Proof-of-concept in hepatocellular carcinoma patients treated with sorafenib

Provenance and peer review: Invited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 05391966

Position: Peer Reviewer

Academic degree: PhD

Professional title: Professor

Reviewer’s Country/Territory: China

Author’s Country/Territory: Spain

Manuscript submission date: 2021-11-09

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-11-17 02:19

Reviewer performed review: 2021-11-20 03:04

Review time: 3 Days

SPECIFIC COMMENTS TO AUTHORS
Title: Reflects the content of the study
Abstract: Well written
Introduction: Well written
Materials and Methods: Very complicated. Especially a third party reader get lost while trying to figure out the study design process. I recommend a flow chart to tabulate the functions of the individual cohort
Results: Although the results seems striking, the authors show absolutely no data regarding response to therapy, recurrences, OS and DFS of the patients. Although the SNPs' that are being studied correlate with AHT and the dermatologic adverse event, the manuscript is structured around response to treatment and the reader expects these results. Furthermore, the results section is equivocally complex and very hard to understand. Discussion well written
Tables and figures are sufficient
The ethical guideline have been followed and the manuscript is written according to the guidelines of the journal
