### COMMENTS TO AUTHORS

This is a compressive and well written review of the therapeutic and prevention strategies against human enterovirus 71, which is predicted to replace poliovirus as the extant neurotropic enterovirus of highest global public health significance. This review is of potential interest, impact, and importance, as there is no effective antiviral treatment and vaccine available to prevent fatal human enterovirus 71 infection.

### COMMENTS TO AUTHORS

Dr. Kok presents in his review an up-to-date summary of therapeutic and prevention strategies against human enterovirus 71 infection. The paper describes the potential of natural therapeutic products and synthetic antiviral compounds in the treatment of EV71 highlighting prospects as well as problems. The manuscript further summarizes the current state of vaccine development including inactivated as well as attenuated vaccine approaches. The paper appears well structured and written and will help to direct more attention towards the probably most hazardous enterovirus after poliovirus. The list of references appears to be comprehensive, appropriate and up-to-date. The only minor comment would be to maybe add a few subheadings to the chapters in order to ease the reader to find specific topics. I recommend accepting this manuscript for publication.

### COMMENTS TO AUTHORS

This manuscript by B Chee Choy Kok reviewed the current progress in therapeutic and prevention strategies against human enterovirus 71 infections. The manuscript is well organized and written and worthy of publication. Specific aspects: 1. The lack of line numbers makes it difficult to make a detailed review. 2. The topics of this paper seem to be a bit scattered and should be more focused. 3. The author is recommended to include Tables/Figures to summarize and compare different therapeutic and prevention strategies against human enterovirus 71 infections. 4. The author is suggested to address the major challenges and prospects of current therapeutic and prevention strategies in the conclusive remarks. 5. The manuscript should be written consistently in either British English or American English. The manuscript needs minor language editing.

### COMMENTS TO AUTHORS

The review by Kok is well-written, and the micro RNA which inhibited EV71 should be mentioned in "Other Therapeutic Strategies" session. Minor points p. 13, l.10: Chen et al. 2009 should be changed by the citation number (69?).
