SPECIFIC COMMENTS TO AUTHORS

This manuscript explores the perception and usage of social media and its impact on the mental health of Indian adolescents, conducting a thorough examination of the influence of social media on adolescent mental health from a forensic perspective. The author's sample consists of Indian adolescents. Overall, I believe this paper is somewhat innovative, given the current high level of attention to adolescent mental health issues. I think the paper can be published, but several modifications and improvements are necessary before publication. First, the introduction and literature review sections should focus more on the adolescent mental health group. Specifically, the review of existing research should be enhanced. The author should mention in the introduction and literature review that many studies have already used longitudinal data. These data indicate that adolescent mental health issues are a dynamic process and that there is heterogeneity among different groups. These studies should be compared and discussed in the discussion section. Second, the age range for adolescents should be clearly defined, as 14 to 23 years old is not a conventional definition of adolescence. Third, the statistical analysis section should employ more detailed research methods, such as differential

analysis and regression analysis. Fourth, based on the author's research conclusions, some practical research suggestions should be proposed. Especially considering the current applications of artificial intelligence in mental health, which are numerous.
