COMMENTS TO AUTHORS

The authors reviewed the diagnosis and treatment of hepatic echinococcosis. Since clinical course and treatment of echinococcosis have not been well-recognized in non-endemic area, this review will be helpful for considering the diagnosis and treatment. This manuscript is well written, but the following points will further improve the quality of your paper. 1. I could not understand capitonnage. Please explain it. 2. Please discuss the reason why the recurrence rates vary between 2% and 40%. 3. Thebilliary tracts → need space after "The". 4. Introduction; while most CE patients have a single cyst, 20%–40% tend to harbor multiple cysts. I think that "20%–40%" change to "20-40%" is better. Because many hyphens were used in this manuscript, unifying the font is better. 5. Clinical presentation, last sentence; I think "liver apses" is perhaps typographical error of "liver abscess". 6. Diagnosis, last paragraph; I want you to show the frequency of anaphylaxis as a complication of percutaneous fine needle biopsy to CE. 7. Percutaneous treatment, third paragraph; A review of percutaneous CE treatment (n = 5.943), revealed a 0.03% incidence of lethal anaphylaxis and1.7% incidence of allergic reactions. Please insert space between "and" to "1.7%". 8. Surgical treatment, first sentence; what is the kiz vesicle?
