COMMENTS TO AUTHORS

This is a comprehensive review for a hot topic NASH with evidence of associated hepatocellular carcinoma. The author is written well and should be beneficial for the readers. In my opinion, it should be acceptance for publication without alter.

COMMENTS TO AUTHORS

The authors reviewed the relationship between HCC and NASH, which is a timely review. NASH-related HCC is increased rapidly especially after the HCV effective treatment. The review is well organized and well written. Minor suggestion: Grammar errors need to be corrected before acceptance for publication.

COMMENTS TO AUTHORS

This article entitled "Hepatocellular Carcinoma in Non-Alcoholic Steatohepatitis: Current Knowledge, and Implications for Management" is more likely to be a lecture handout than a journal article. The manuscript is written a bit more prolix and intrusive. For instance, the sub title 'epidemiology' can be involved in the part of introduction. No need to be a separated title. Likewise other sub titles. There are also many repeated sentences with similar meaning in different paragraph. This article should be re write with more focus and include logical and reasonable thinking.

COMMENTS TO AUTHORS

The authors well reviewed hepatocellular carcinoma in NAFLD and NASH. This paper is unique, interesting and well-reviewed. However, because there is minor limitation, it is accepted after minor change in this journal. Minor limitation 1. To explain the phenomenon in non-cirrhotic NAFLD patients, the malignant transformation of hepatic adenoma is overstated. 2. There are grammatical errors; deemografic in page 4, were were in page 9.
