Liver tumors in children with chronic liver diseases

Sintusek P et al. Pediatric liver tumors

Palittiya Sintusek, Teerasak Phewplung, Anapat Sanpawat, Yong Poivorawan

Abstract
Liver tumors are rare in children, albeit the incidence may increase in some circumstances and particularly in chronic liver diseases. Most liver tumors consequent to chronic liver diseases are malignant hepatocellular carcinoma. Other liver tumors include hepatoblastoma, focal nodular hyperplasia, adenoma, pseudotumor, and nodular regenerative hyperplasia. Screening of suspected cases is beneficial. Imaging and surrogate markers of alpha-fetoprotein are used initially as noninvasive tools for
Liver tumors in children with chronic liver diseases

Chronic Liver Diseases in Children: Clinical Profile and Management
Another aim being the prognosis and to know the outcome and the effects of treatment in chronic liver diseases in pediatric age group. Materials and methods: It was a prospective study, included the clinical profile of Chronic Liver Diseases (CLD) in children and the histopathological correlation. A total of 55 children were...

Liver Conditions in Children | Johns Hopkins Medicine
https://www.hopkinsmedicine.org/health/conditions...
- Cirrhosis or Chronic Liver Failure. Cirrhosis or chronic liver failure can be caused by a number of the liver and biliary diseases listed in Clinical Services or sometimes appear without known cause. Our approach to pediatric patients with this problem is to start with a thorough history and physical examination and nutritional assessment. We also have a frank discussion with the patient and family about what is involved in the evaluation for a life-saving liver transplant. Liver Graft or Tumor...

Definition & Facts of NAFLD & NASH in Children | NIDDK
https://www.niddk.nih.gov/health-information/liver-disease/nafld-nash-children/... - NAFLD is the most common cause of chronic liver disease in children in the United States. Researchers estimate that close to 10 percent of U.S. children ages 2 to 19 have NAFLD. 1 NAFLD has become more common in children in recent decades, in part because childhood obesity has become more common.

Pediatric Liver Tumors: Overview, Benign Tumors, Malignant...
- Most children with liver tumors present with abdominal distension, a palpable abdominal mass, or both. Anemia, thrombocytopenia, and leukocytosis are sometimes present. Children...

Neurologic Manifestations of Chronic Liver Disease and Related Disorders
Neurologic damage in chronic liver disease and liver cirrhosis seems to be multifactorial primarily attributable to the following: brain accumulation of ammonia, manganese, and lactate; altered permeability of the blood-brain barrier; recruitment of monocytes after microglial activation; and neuroinflammation, that is, direct effects of circulating systemic proinflammatory cytokines such as tumor...

Liver Disease in Children | SSM Health
https://www.ssmhealth.com/.../liver-diseases
- When the liver becomes severely damaged it can result in acute or chronic liver disease, or liver failure - both of which are life-threatening conditions. Our team of SSM Health River Valley Physician Group hepatologists (liver doctors) at SSM Health Cardinal Glennon Children's Hospital are leaders in the care of children with liver disease.
