

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 92822

Title: Congophilic fibrils in the glomeruli with polyclonal IgG staining - Amyloidosis or Fibrillary Glomerulonephritis? Another cause for diagnostic overlap.

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 03208929

Position: Peer Reviewer

Academic degree: PhD

Professional title: Professor

Reviewer's Country/Territory: China

Author's Country/Territory: United States

Manuscript submission date: 2024-02-06

Reviewer chosen by: Jia-Ru Fan

Reviewer accepted review: 2024-02-23 04:43

SPECIFIC COMMENTS TO AUTHORS

Thank you for submitting your article entitled "Congophilic fibrils in the glomeruli with polyclonal IgG staining - Amyloidosis or Fibrillary Glomerulonephritis? Another cause for diagnostic overlap: A case report." Through careful reading of the manuscript, I can see the seriousness of the author's approach to the field of renal amyloidosis, and I believe that the manuscript can be published in this journal. This manuscript not only explains the reasons why AHL amyloid diagnosis is prone to diagnostic errors, but also proposes that in order to avoid diagnostic errors, it is necessary to use a variety of diagnostic methods (including special staining, immunohistochemistry, immunofluorescence, electron microscopy and even mass spectrometry) for accurate diagnosis, which is of great significance for the diagnosis and prognosis of patients with rare diseases, which can arouse the attention of clinicians to the diagnostic defects of the disease, and has guiding significance for the clinical diagnosis of diseases.
