

Supplementary Material 1 Magnetic resonance imaging imaging protocol

All patients underwent MRI with a 1.5-T system (Signa CV/i; General Electric Healthcare, Chalfont St. Giles, United Kingdom) or 3.0-T system (Siemens Magnetom Tim Trio, Erlangen, Germany). The scan area ranged from the suprasellar cistern to the inferior margin of the sternal end of the clavicle.

MR sequences included T1-weighted fast spin-echo images in the axial, coronal, and sagittal planes and T2-weighted fast spin-echo images in the axial plane before injection of the contrast material. After intravenously administering gadolinium-based contrast material (0.1 mmol/kg of body weight), spin-echo T1-weighted axial, sagittal, and fat-suppressed coronal sequences were acquired sequentially using the same parameters. The scanning parameters for the T1WI scan were FSE, TR=540 ms, and TE=11.8 ms and for T2WI scan were FSE, TR=4000 ms, and TE=99 ms. The section thickness was 5 mm with a 1 mm interslice gap.

Supplementary Material 2

Detailed MRI report in NPC

Name of patient: _____ Sex: _____ Age: _____ Hospitalization number: _____

MRI check-up number: _____ Check-up date: _____

Scan range(1=nasopharynx, 2=nasopharynx + neck)

1. Primary tumor

(1) Nasopharynx (Description of main body of the lesion; Location: left right bilateral ; Maximum diameter of the lesion: axial ____ coronal ____ sagittal ____ mm);

(2) Extra-cavitory extension

A. Oropharynx (Lower boundary exceeds the first and second intervertebral space): (Anterior wall Posterior wall left wall right wall);

B. Nasopharynx (The front boundary exceeds the line between the bilateral pterygopalatina fossa): (Posterior half of nasal canal: left right bilateral ; Anterior half of nasal canal: left right bilateral);

C. Hypopharynx (Lower boundary exceeds the lower margin of the third vertebral body or the hyoid body level): (Anterior wall Posterior wall left wall right wall);

(3) Muscles and mandible

Muscles (Prevertebral muscles[longus capitis]: left right bilateral ; Tensor veli palatini muscles: left right bilateral ; Levator veli palatini muscles: left right bilateral ; Internal pterygoid muscle: left right bilateral ; External pterygoid muscle: left right bilateral ; Temporal muscle: left right bilateral ; Masseter muscle: left right bilateral ;)

Mandible ramus: left right bilateral .

(4) Fascial space and fossae (Anterolateral space of tensor veli palatini muscles is defined as pre-styloid process space; Posteromedial space of tensor veli palatini muscles is defined as posterior styloid process space; The posterior styloid space was separated to carotid sheath area and retro-pharyngeal space by inside edge of bilateral internal carotid artery. The carotid sheath area is outside and the retro-pharyngeal space is inside).

A. Pre-styloid process space (Tensor veli palatini muscles: left□ right□ bilateral□; Levator veli palatini muscles: left□ right□ bilateral□; Internal pterygoid muscle: left□ right□ bilateral□; External pterygoid muscle: left□ right□ bilateral□; Temporal muscle: left□ right□ bilateral□; Masseter muscle: left□ right□ bilateral□; Mandible ramus: left□ right□ bilateral□.)

B. The carotid sheath area (Non-invasion of carotid sheath: left□ right□ bilateral□; The lesion does not invade carotid sheath but push and press it: left□ right□ bilateral□; The lesion invades carotid sheath without exceeding the posterior margin of the jugular vein: left□ right□ bilateral□; The lesion invades carotid sheath with exceeding the posterior margin of the jugular vein: left□ right□ bilateral□.)

C. Retro-pharyngeal space (left□ right□ bilateral□);

D. Pre-vertebral space (left□ right□ bilateral□);

E. Parotid space (left□ right□ bilateral□);

F. Para-oropharyngeal space (left□ right□ bilateral□);

G. Pterygopalatina fossa (left□ right□ bilateral□);

H. Infratemporal fossa (left□ right□ bilateral□);

(5)Skull base and intracalvarium

A. Medial plate of anterior part of pterygoid process (left□ right□ bilateral□); Lateral plate of pterygoid process (left□ right□ bilateral□); Basal part of pterygus (left□ right□ bilateral□);

B. Basal part of sphenoid bone (left□ right□ bilateral□); Greater wing of sphenoid (left□ right□ bilateral□); Cavernous Sinus (left□ right□ bilateral□); Meninges (left□ right□ bilateral□); Intracal (left□ right□ bilateral□);

C. Petrous portion of temple bone (left□ right□ bilateral□); Clivus (left□ right□ bilateral□); Lacerated Foramen (left□ right□ bilateral□); Anterior pon cistern (left□ right□ bilateral□); Brainstem (left□ right□ bilateral□);

D. Occipital condyle (left□ right□ bilateral□); Massa lateralis atlantis (left□ right□ bilateral□); Axis (left□ right□ bilateral□);

E. Foramen rotundum (left□ right□ bilateral□); Anterior condyloid foramen (left□ right□ bilateral□); Jugular foramen (left□ right□ bilateral□); Great occipital foramen (left□ right□ bilateral□); Foramen rotundum (left□ right□ bilateral□); Pterygoid canal (left□ right□ bilateral□);

(6)Paranasal sinuses, mastoid air cell, aural region, orbital part

Ethmoid sinus: (tumor invasion: left□ right□ bilateral□); Maxillary sinus: (tumor invasion: left□ right□ bilateral□); Sphenoid sinus: (tumor invasion: left□ right□ bilateral□); Frontal sinus: (tumor invasion: left□ right□ bilateral□);

Mastoid air cell: (tumor invasion: left□ right□ bilateral□; Inflammation: left□ right□ bilateral□);

Middle ear(Middle ear cavity): (tumor invasion: left□ right□ bilateral□); Inner ear(Cochlea): (tumor invasion: left□ right□ bilateral□);

Orbital apex: (tumor invasion: left□ right□ bilateral□); Inferior orbital fissure: (tumor invasion: left□ right□ bilateral□); Anterior lacerate foramen: (tumor invasion: left□ right□ bilateral□);

(7)Cranial nerve

Cribriform plate of ethmoid bone: (tumor invasion: left□ right□ bilateral□);

Chiasma opticum: (tumor invasion: left□ right□ bilateral□);

Optic nerve: (tumor invasion: left□ right□ bilateral□);

The third cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

The forth cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

The fifth-first cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

The fifth-second cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

The fifth-third cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

The fifth-third cranial nerve in extracranial section: (tumor invasion: left□ right□ bilateral□);

Trigeminal ganglia: (tumor invasion: left□ right□ bilateral□);

The cisternal segment of trigeminal nerve: (tumor invasion: left□ right□ bilateral□);

The sixth-third cranial nerve in cavernous sinus: (tumor invasion: left□ right□ bilateral□);

Aquaeductus fallopii: (tumor invasion: left□ right□ bilateral□);

Internal auditory meatus: (tumor invasion: left□ right□ bilateral□);

The cisternal segment of the ninth, tenth, eleventh cranial nerve: (tumor invasion: left□ right□ bilateral□);

The cisternal segment of the hypoglossal nerve: (tumor invasion: left□ right□ bilateral□);

(8) Surrounding structures of eustachian tube

Eustachian tube: (tumor invasion: left right bilateral);

Pharyngeal opening of eustachian tube: (tumor invasion: left right bilateral);

The cartilaginous portion of the eustachian tube: (tumor invasion: left right bilateral);

Partes ossea tubae pharyngotympaniae: (tumor invasion: left right bilateral);

Fossae lateral pharyngeal: (tumor invasion: left right bilateral);

The inside of the cartilage of eustachian tube: (tumor invasion: left right bilateral);

Ostmann fat pad: (tumor invasion: left right bilateral);

2.Regional lymph node.

(1) The criterion of partition is based on 2013 standards.

(2)For the cross regional lymph nodes, the location of the lymph nodes should be defined by the center position(the main lymph node position) and the invasion of lymph nodes of other regions should be noted.
