

**Methionine depletion inhibits hepatocellular carcinoma by inducing
ferroptosis and suppressing epithelial-mesenchymal transition
through the ARNT2/UBE2Z pathway**

Supplementary Material

Figure S1

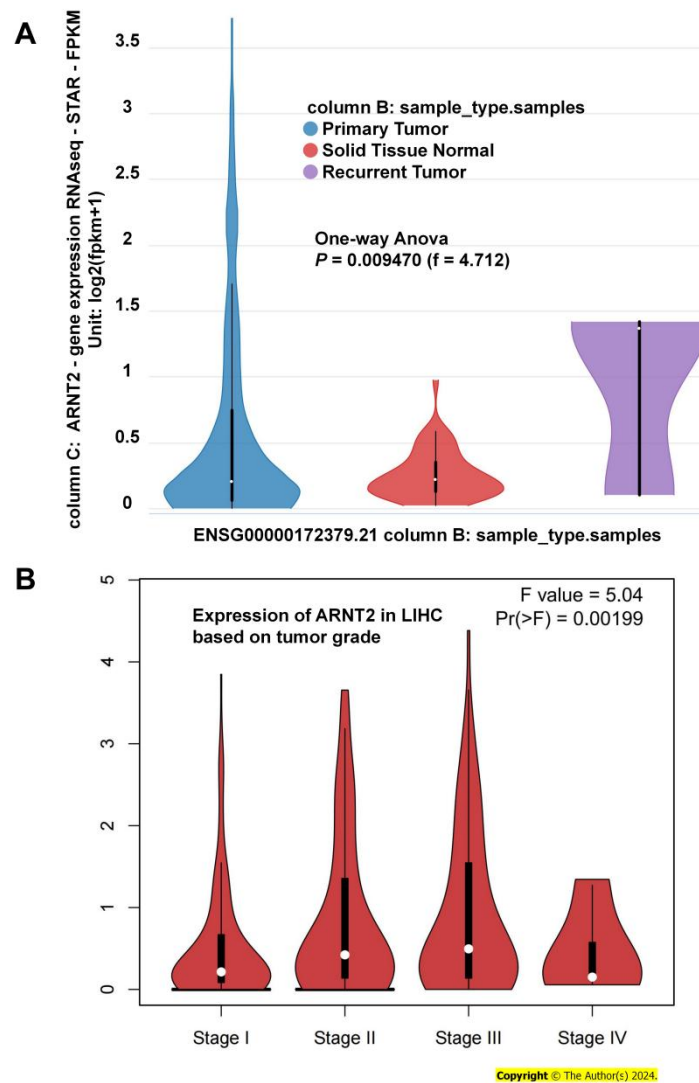

Figure S1 Aryl hydrocarbon receptor nuclear translocator 2 (*ARNT2*) is highly expressed in hepatocellular carcinoma tissues. A: *ARNT2* gene expression was analyzed using the UCSC Xena online database; B: *ARNT2* gene expression was analyzed using the GEPIA 2 online database. LIHC, liver hepatocellular carcinoma.
