**Supplementary Figure 1 Reasons for not receiving subsequent line treatment among patients who never received anti-epidermal growth factor receptor therapy.**

**Supplementary Figure 2 Comparison of overall survival between patients who received and never received anti-epidermal growth factor receptor treatment in all patient populations.** Kaplan-Meier survival analysis with long-rank test of overall survival by receiving or not receiving anti-EGFR treatment in all patients. Median overall survival in patients who received anti-EGFR was 32.50 months (95% CI 28.64-36.36). Median overall survival in patients who never received anti-EGFR was 19.70 months (95% CI 12.87-26.53). Log rank test = HR 0.65, P-value = 0.005.
