SPECIFIC COMMENTS TO AUTHORS
The authors present a case with anti-NMDAR encephalitis and laryngospasm. This case report is of interest because laryngospasm is a rare clinical manifestation of anti-NMDAR encephalitis. The manuscript is clearly written. However, I have the following two comments: 1. In discussion, the authors may consider elaborating more about the general prognosis of the disease. 2. The authors may consider mentioning a new treatment option with Bortezomib (1). (1) Scheibe et al., Neurology 88 (4), 366, 2017

**SPECIFIC COMMENTS TO AUTHORS**

Dear Authors, this is an interesting case of a rare encephalitis with an uncommon clinical presentation. Please provide the normal range of all laboratory parameters presented in your manuscript. A language revision should be also conducted by a native English speaker. Best Regards
