SPECIFIC COMMENTS TO AUTHORS
The present letter to the editor is related to the study titled "Preoperational diagnosis and management of breast ductal carcinoma in situ arising within fibroadenoma: Two case reports". Based on this study showing that malignancy can develop on fibroadenomas, the authors wanted to emphasize that careful sonographic follow-up of fibroadenomas should be done and that each lesion should be followed carefully and separately in cases with multiple fibroadenomas. Additionally, the authors wanted to emphasize the critical role of sonographic examination in diagnosing fibroadenoma, the importance of correctly defining benign and malignant sonographic findings, and which lesions should be followed up sonographically and which lesions should be evaluated histopathologically. This letter is well structured. The topic is the reader's potential interest, and the whole article is continuous, logical and clear.

SPECIFIC COMMENTS TO AUTHORS
The present letter to the editor is related to the study titled "Preoperational diagnosis and management of breast ductal carcinoma in situ arising within fibroadenoma: Two case reports". The authors wish to emphasize the importance of ultrasound follow-up in the progression of fibroadenoma to malignancy. Breast fibroadenoma is a very common benign tumor in clinical practice, and ultrasound follow-up is generally used in clinical practice. The author should pay more attention to the differential diagnosis of benign and malignant lesions based on ultrasound follow-up, combined with other imaging examinations, such as contrast-enhanced ultrasound, DBT, MR multi-quantitative parameter functional imaging, etc. To improve the sensitivity of malignant transformation of breast fibroadenoma.
