COMMENTS TO AUTHORS

Though interesting and well-wrote case report it is, the implication seem to be rather low deserving for publication as case report.

COMMENTS TO AUTHORS

I read with interest the intriguing case report on localized Immune Pancreatitis by Urata T and coworkers. I congratulate the Author for this very well designed and reported case report. No suggestions from this side.

COMMENTS TO AUTHORS

1. An important diagnostic criteria for autoimmune pancreatitis is elevated serum IgG4 levels which have not been provided. 2. The patient had normal pancreatic duct as seen on MRCP and ERP. An explanation is required. 3. Were there any other organ involvement.

COMMENTS TO AUTHORS

This is the interesting case and well written paper. The table is not necessary because the result is totally normal. Figure 5 can be deleted due to too many figures.
