SPECIFIC COMMENTS TO AUTHORS

Reviewer comments for author Reviewer #: General comments It's Very interesting study, however there are many areas need to be covered based on the title but a good manuscript for this journal. Abstract: should be more specific and clear. Result Please provide the level of confident when comparing group in both explanation in result and discussion. Discussion: Expension on the discussion will make the manuscript more interesting to read. Conclusion Weak and need to be re written based on the finding.

SPECIFIC COMMENTS TO AUTHORS

This manuscript was addressed the global trend of diet and nutrition in Crohn's Disease by using bibliometric analysis method with VOSviewer software. The overall results were acceptable, however, I found that the English grammar needed to be substantially polished. The abstract format was not correct. The references format was not correct.

SPECIFIC COMMENTS TO AUTHORS

The authors follow the current evolution of perspectives on the management of patients with Crohn's disease, including exclusive enteral nutrition and the role of gut microbiota. Based on the results of the bibliographic research, the authors show that these topics are topical and are likely to be the subject of further research. The authors analysed papers from the last 20 years in the Scopus database. Its strength is the comprehensive evaluation of individual bibliographic parameters (keywords, journal, publishing country...) and their relationship using the co-occurrence network map. In the future, it would certainly be useful to include other databases such as PubMed in the analysis (which is mentioned in the limitations). In any case, this work can be a guide for other (less) experienced researchers interested in studying current nutritional issues in Crohn's disease patients. -Although their meaning is clear, not all abbreviations are clearly explained in the text (especially enteral and parenteral nutrition) -in Material and methods, section "search strategy" - It is not clearly explained on the basis of which criteria the specific three publications were selected to define the keywords. -Reference to figures 2 and 5 is missing in the text. Table 5 is labeled "Figure 5".
