Recent advances in non-invasive magnetic resonance imaging assessment of hepatocellular carcinoma

Ippolito D et al. Advances in magnetic resonance liver

Davide Ippolito, Riccardo Inchingolo, Luigi Grazioli, Silvia Girolama Drago, Michele Nardella, Marco Gatti, Riccardo Faletti

Abstract

Magnetic resonance imaging of the liver is an important tool in terms of detection and characterization of focal liver lesions and for assessment of diffuse liver disease, having several intrinsic characteristics, represented by high soft tissue contrast, avoidance of ionizing radiation or iodinated contrast media, and more recently, by application of
