SPECIFIC COMMENTS TO AUTHORS
Thank you for the possibility to review the manuscript titled: “Double tracheal stents reduce side effects of progression of malignant tracheoesophageal fistula treated with immunotherapy: A case report”. The manuscript itself is interesting and easy to read. The management of complications of esophageal cancer is often challenging and requires multidisciplinary team. There are no major recommendations. There are few minor corrections: -Please review the manuscript for type errors. For instance: “Although the fistula progressed rapidly after immunotherapy, it was still be covered completely” I presume that there is a mistake in the sentence at the point “it was still be covered”. -Authors state “After palliative treatment for infection and hemostasis”. Please include the drugs and dosages. Please take into account the recommendations in the spirit of improving the quality of the submission.
