Background Case Presentation Discussion and Conclusion

Multiple primary cancers (MPC) occurring in the same individual is rare but being more recognized owing to the prolonged lifespan and improved cancer survival nowadays.¹ Cancer is a genomic disorder that advancing age ranks the top risk factor, and the lifetime risk for any cancer is estimated as 1/2 to 1/3.² The prevalence of two or more primary tumors in the US population is 0.27% based on a report in 2007.¹Therefore, it becomes increasingly important to accumulate the understanding of molecular basi...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4845605>

Since in patients with multiple cancers, the focus is mainly on the primary disease, there is a higher likelihood of missing incidental co-existence of another primary malignant lesion. Therefore, it is important to make an early diagnosis and administer prompt therapy in case of multiple cancers. [2]
