Botulinum Toxin Use in Complex Abdominal Wall Hernias ...

https://www.researchgate.net/publication/316048830_Botulinum_Toxin...

Conclusions The application of preoperative **botulinum toxin** type A for the **management of complex** ventral hernia is of great utility, but there is only one prospective study in which the benefit ...

Botulinum Toxin as Adjunct in Complex Abdominal Wall ...

<https://www.sages.org/meetings/annual-meeting/abstracts-archive/...> ▾

Conclusions: **Botulinum toxin** was easily administered under ultrasound guidance, and appeared to have a measureable effect at a dose of 50 units per side by day 4. Short-term results were promising in a wide range of **complex hernias** and hold hope for a reduction in long-term recurrence rates.

Preoperative Botulinum toxin A enabling defect closure and ...

<https://link.springer.com/article/10.1007/s00464-017-5750-3> ▾

The **repair of complex ventral hernias** is particularly challenging for **surgeons**, and despite new techniques and approaches, recurrence rates remain alarmingly high. BTA is a new technique with great potential for the preoperative preparation of the **abdominal** wall prior to surgical repair [12].

Conclusion: Preoperative BTA injection prior to complex abdominal hernia repair is a safe procedure that causes flaccid relaxation, elongation and thinning of the lateral abdominal muscles and decrease in hernia defect. Although further evaluation is required, BTA injections may be a useful adjunct to surgical repair of complex incisional hernias.
