Advanced imaging techniques in the therapeutic response of transarterial chemoembolization for hepatocellular carcinoma

Yang Ke, Zhang Xiao-Ming, Yang Lin, Xu Hao, Peng Juan

Abstract

Hepatocellular carcinoma (HCC) is one of the major causes of morbidity and mortality in patients with chronic liver disease. Transarterial chemoembolization (TACE) can significantly improve the survival rate of patients with HCC and is the first treatment choice for patients who are not suitable for surgical resections. The evaluation of the
