Liver cancer stem cell markers: Progression and therapeutic implications

Jing-Hui Sun, Qing Luo, Ling-Ling Liu, Guan-Bin Song

Abstract

Cancer stem cells (CSCs) are a small subpopulation in cancer, have been proposed to be cancer-initiating cells, and have been shown to be responsible for chemotherapy resistance and cancer recurrence. The identification of CSC subpopulations inside a tumor presents a new understanding of cancer development because it implies that tumors can only be eradicated by targeting CSCs. Although advances in liver cancer detection and treatment
