COMMENTS TO AUTHORS

In my opinion this paper is not publishable in its current format and should be rejected or subjected to re-writing. Although a review of the literature on the results of triple osteotomies is worthwhile is needs to be much more structured and a great deal of English improvement. The authors case series is our of place the way they structured the manuscript and poorly written. I suggest that that should be prepared as a separate report which will require critical analysis of the results in the context of the results of other techniques which are routinely used and have excellent established results

COMMENTS TO AUTHORS

Good review, few cases, I would change the title to: Triple pelvic osteotomy: report of 6 cases and literature review, and would resume the extensive review in 3 or 4 tables including results, degree of correction, rehabilitation, complications, etc.
