Acute portal vein thrombosis after liver transplant presenting with subtle ultrasound abnormalities: A case report and literature review

Thomas Couri, Carla Harmath, Talia Baker, Anjana Pillai

Abstract

BACKGROUND

Portal vein thrombosis (PVT) after liver transplantation (LT) is an uncommon complication with potential for significant morbidity and mortality that transplant providers should be cognizant of. Recognizing subtle changes in post-operative ultrasounds that could herald but do not definitively diagnose PVT is paramount.

CASE SUMMARY

A 30-year-old female with a history of alcohol-related cirrhosis presented with painless
