## Parkinson's disease

Medical Condition

Starts with tremors in one hand; slow movement, stiffness and loss of balance

A chronic and progressive movement disorder.

- Common (More than 200,000 cases per year in US)
- Diagnosis often requires lab test or imaging
- Treatments can help manage condition, no known cure
- Can last several years or be lifelong

Parkinson's disease is caused by a loss of nerve cells in substantia nigra of the brain. This leads to a reduction in a chemical called dopamine in the brain. Many different symptoms are associated with Parkinson's disease and the more common symptoms are slowness in movement and muscle stiffness. Currently there is no cure for Parkinson's disease. But,
