SPECIFIC COMMENTS TO AUTHORS
• In line 17 page 7, ther is a contradiction when the authors said that the bundaries of the tumor was unclaear. And in the introduction of the aricle, the authors mentionned that swannoma is a benign lesion with clear limits. • There is no indication for PET computed tomography for a benign lesion. It not necessary to speak about it (lines 3,4 et 5 page 8). • In the room theater the quantity of bleeding was not precised. And blood transfusion was it required. • Outcome and the quality of life was not being precised with a short form score or other scoring system of the quality of life.

SPECIFIC COMMENTS TO AUTHORS
1. This case report discussed about a large schwannoma involving T5 and T6 vertebral bodies compressing upon the spinal cord and complete removal of the tumour by combined thoracic and spinal surgeons with an uneventful recovery and excellent outcome at 2 years follow up period. Removal of such a large spinal tumour without any residual neurological symptoms is commendable and it implies that the morbidity of such patients can definitely be reduced by a combined surgical approach and immediate reconstruction for spinal stabilization. This essence should be highlighted in the objective of the “Background” section of the manuscript (Abstract, Line 3).
2. In “Introduction”, the most common site of a schwannoma should be mentioned properly as the line “on the outside of and inside the intradural spinal-epidural spine” is not very clear (Introduction, Line 14).
3. In “Outcome and Follow up” section, it would be better if the authors mention about recovery of the patient in the immediate postoperative period.
4. Certain grammatical corrections and improvements in language throughout are required.
5. Language editing in Figure 4 legend and spelling correction in Figure 5 legend is required.
Apart from these suggestions I would say that this article aiming at highlighting about the surgical management and successful outcome of a large spinal schwannoma is no doubt a good case report and will definitely enrich our literature on this topic as well as provide learning points for surgeons.
